DETAILED ACTION

Status of the Claims

Applicants' Request for Continued Examination (RCE) under 37 C.F.R. 1.114 filed on April 21, 2004 and a response to Examiner's amendment with the notice of Allowance dated January 21, 2004, filed on February 23, 2004 is acknowledged. Examiner's amended claims 20, 21 and new claims 23-31 have been entered. Claims 1-19 have been canceled. Therefore, claims 20-31 are currently pending.

An **Examiner's Amendment** to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Examiner's Amendment to the Claim

Claim 20 has been amended to read as:

20. (Amended) A method for dissolving a thrombus in a mammal, comprising the step of administering to said mammal a pharmaceutically effective amount of an isolated, purified or recombinant antithrombosis enzyme from *Agkistrodon actus* having the following characteristics:
- the molecular weight of said enzyme is between about 28 kD and about 32 kD when analyzed by polyacrylamide gel electrophoresis,
 - the aspartic acid content of said enzyme is between about 2% and about 5%,
 - the glutamic acid content of said enzyme is between about 2% and about 5%, and
 - said enzyme hydrolyzes fibrin, dissolves blood clots, and prevents platelet aggregation.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Michael Wise on August 2, 2004.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest a method for dissolving a thrombus in a mammal, comprising the step of administering to said mammal a pharmaceutically effective amount of an isolated, purified or recombinant antithrombosis enzyme from *Agkistrodon actus*, having a molecular weight of 28 kD to 32 kD, with 2% to 5% aspartic acid and glutamic acid wherein said enzyme hydrolyzes fibrin, dissolves blood clots, and prevents platelet aggregation. Further said enzyme is used for treating a thrombosis related disease in a mammal by administering a pharmaceutically effective amount of said enzyme. Therefore the claims are allowable over the art of record. .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Claims 20-31 are allowed.
